

LEORIX — Website Content

Scope: copy for every section in the structure spec. Site is unpublished and being built in parallel to the FDDI engagement, so committed copy is used throughout. The only placeholders that remain are **measured numbers** that arrive after validation.

Driving principle (the spine — everything passes through this)

We say what we do, and we do what we say. No loose statements. No claim without proof.

Operating rule that follows from it:

- **What we DO** — our design targets, our engineering method, and the FDDI engagement scope and its deliverables — is contracted and real. **Say it now.**
- **What we EXPECT** — anticipated results before the data exists — is pre-judging. **Don't say it.**
- **What we've MEASURED** — quantified findings from validation — is the proof. **Placeholder now, fill on confirmation.**

[NUMBER] = a measured value that drops in post-validation. Everything not marked

[NUMBER] is committed and publishable.

0. Voice & writing principles

Write the way the shoe is engineered: precise, confident, unhurried. Trust is earned by being specific and by *under*-claiming relative to the proof.

- **Specifics over superlatives.** A number beats an adjective; a method beats a boast.
- **Short, declarative sentences.**
- **No hype words:** revolutionary, game-changing, ultimate, cutting-edge, world-class.
- **Describe the method as fact; reserve numbers for after measurement.**
- **Indian-confident, globally legible.** Engineered, here.

1. Global elements

Announcement bar

- **Pre-launch:** First drop coming soon – join the list for early access.
- **Live:** Free shipping across India. [or active promo]

Primary nav: Shop · Technology · About **Shop dropdown:** Men · Women · The Vault

Footer

- **Tagline:** We say what we do, and we do what we say.
 - **Columns:** Shop · Technology · About · Help
 - **Help:** Size & Fit · Shipping & Returns · FAQ · Contact
 - **Legal:** Privacy Policy · Terms of Service
 - **Newsletter:** Get the first drop, and the engineering behind it. [email] → Join

2. Homepage — section by section

Module 1 — Hero

Headline — recommended:

- **A. Designed to look right. Engineered to prove it.** ← recommended; claims a method, not a result
- **B.** We design it to look right, then engineer it to prove it.
- **C.** Looks designed. Built to be proven.

Subline: LEORIX builds lifestyle footwear on engineering principles – stability, controlled cushioning, and all-day comfort – and validates it at FDDI before it reaches you.

CTA:

- **Pre-launch:** Join the list →

- **Live:** Shop the drop →

Module 2 — The Problem

Eyebrow: THE GAP **Headline:** Casual shoes are styled. Performance shoes are over-built. Almost nothing is both. **Body:** Lifestyle footwear is usually designed to look good and engineered as an afterthought. Performance footwear is engineered for sport, then loaded with tech you don't need for a full day on your feet.

LEORIX sits in the gap: the comfort and stability of a properly engineered shoe, in something you'd actually wear every day – and the testing to back every word of that sentence.

Module 3 — The Approach

Eyebrow: HOW WE BUILD **Headline:** Design-led. Engineering-backed. Measured, not assumed. **Body:** Every LEORIX shoe starts as a design and is then engineered against defined targets: rearfoot stability, controlled midfoot torsion, even plantar load distribution, and long-duration wear comfort. We set those targets, build to them, document them component by component, and validate them. **Three pillars:**

1. Defined targets — Measurable performance goals are set before a material is chosen.
2. Built to spec — Construction and materials are selected to hit those targets, documented part by part.
3. Independently validated — Prototypes are tested at the Footwear Design & Development Institute (FDDI).

Module 4 — Validation / Proof

Eyebrow: THE PROOF **Headline:** Validated at FDDI — by design, not by adjective.

Body: In partnership with the Footwear Design & Development Institute, LEORIX runs two streams of evaluation: mechanical durability — structural integrity and failure-mode analysis — and human biomechanical testing — plantar pressure distribution, joint loading, and functional performance across prototype iterations. This is the engagement, in writing, not a marketing line. **Headline results (post-validation):**

- Plantar pressure distribution: [NUMBER]
- Durability / structural performance: [NUMBER]

- Each figure traces to its FDDI report. **CTA:** See the engineering → (Technology page)

Module 5 — Hero product feature (Article X)

Eyebrow: THE HERO **Headline:** [product name — "X" or its commercial name] **Body:** Our lead silhouette: an engineered breathable upper on a stability-tuned bottom unit, built for all-day wear and engineered to be validated. [One-line construction summary once design is final — resolve construction method first.]

- Pre-launch CTA: Preview the X →
- Live CTA: Shop the X → (*Spec numbers live on the PDP, not here.*)

Module 6 — Collection preview

Headline: The first range. **Body:** Five men's and five women's variants, built on one validated platform.

- Pre-launch: "coming soon" tiles, no prices.
- Live: tiles linking to PDPs.

Module 7 — Social proof

Eyebrow: THE BACKING

- Pre-launch: a credibility strip naming the FDDI collaboration (institution, not testimonials) — per the contract's acknowledgement clause; confirm the agreed format.
- Live: real customer quotes only. Do not fabricate; omit the module until genuine reviews exist.

Module 8 — Conversion block

- Pre-launch (waitlist):
 - **Headline:** Be first — and see the proof first.
 - **Body:** Join the list for early access to the first drop, founder pricing, and the validation data as it's published.
 - **CTA:** Join the list →
 - **Counters:** [NUMBER: real waitlist / country figures only.]
- Live: repurpose into The Vault early-access for future drops.

3. Technology page

Page intro Headline: The engineering behind every pair. **Body:** We say what we do, and we do what we say. Here is what we do — and what we're building the proof of.

3a. The Approach

Headline: Targets first. **Body:** Before design, we define what the shoe must do: measurable targets for rearfoot stability, midfoot torsion control, plantar load distribution, and comfort across a 6-8 hour day. Every later decision is judged against these.

3b. The Engagement — what we're building and validating

Headline: Engineered and tested at FDDI. **Body:** LEORIX is developed in a structured engagement with the Footwear Design & Development Institute, across design, prototyping, and validation. The engagement is contracted to produce:

- A validated footwear platform — five men's and five women's variants on one engineered system.
- Full engineering documentation — 3D CAD models, 2D manufacturing drawings, and material specifications tied to mechanical and functional requirements.
- Functional prototypes fabricated across size ranges for laboratory and human testing.
- A durability and mechanical performance assessment — structural integrity and failure-mode analysis.
- A human biomechanical evaluation — plantar pressure distribution, joint loading, and functional performance across iterations.
- Technical documentation supporting our intellectual property filings. **Note:** every item above is contracted scope — sayable today. Outcomes are described as what the testing *measures*, never as a result we assume.

3c. Validation results

Headline: The findings. **Body:** As each evaluation is confirmed, we publish the result and the report it comes from.

- Plantar pressure distribution — [NUMBER], [FDDI report ref]

- Joint loading / functional performance – [NUMBER], [FDDI report ref]
- Durability / structural integrity – [NUMBER], [FDDI report ref] *(Publish only after the figure is confirmed and, where relevant, after IP filing per the contract.)*

3d. Materials

Headline: Every component, on the record. **Body:** We publish what each part of the shoe is made of and what it's specified to do – because "transparent" should mean you can read the spec, not just hear the word. **Component table:** [populate from the finalized material requirement sheet – material, committed spec/value, function. List committed specs only, not items still "under evaluation." Spec values that depend on testing carry a [NUMBER] until confirmed.] *(Sustainability copy intentionally omitted — no claim without proof.)*

4. About

Headline: An Indian footwear brand, built on engineering. **Body:** LEORIX is a performance-oriented lifestyle footwear brand by KUNJ Business Solutions LLP, Jaipur. We started from a frustration: lifestyle shoes are sold on looks and adjectives, while the things that actually make a shoe good to wear – stability, cushioning that's controlled rather than just soft, comfort that lasts a full day – are rarely specified and almost never proven. So we work the other way around. We set measurable targets, engineer to them, and validate the result with the Footwear Design & Development Institute. Design leads. Engineering proves. We say what we do, and we do what we say. [Optional founder line / origin detail – only if accurate.]

Contact

- Partnerships, press, product questions: [real email – replace placeholder contact@domain.com]
 - [Real business address – replace the placeholder Bali address with the Jaipur LLP or a customer-facing address.]
-

5. Product Detail Page (PDP) — copy template

Title: [product name] **Short descriptor:** [one line: who it's for + the single biggest

engineered benefit] **Buy box microcopy:**

- **Size label:** Select size • Not sure? Size & Fit guide →
- **CTA:** Add to cart / **Pre-launch:** Notify me

Spec & Validation module (the differentiator):

- **Title:** The spec, in full.
- **Intro:** Everything this shoe is made of, and what each part is built to do.
- **Component breakdown:** [per-component material + committed spec + function, from the material sheet]
- **Performance values:** [hardness, density, abrasion, plantar-load – committed values now; tested values as [NUMBER] until confirmed]
- **Validation reference:** [which FDDI report backs which value]
- **Construction:** [final construction method – resolve the vulcanized-vs-stability-goal question first]

Product story (optional): brief design-led paragraph, written per product once designs are final.

6. Size & Fit

Headline: Get the fit right the first time. **Body:** LEORIX is built on one validated last. Here's how it runs and how to size.

- **Size guide:** [real measurement chart – UK/EU/US/cm, by gender]
 - **Fit notes:** [runs true / size up guidance, once confirmed from sampling]
 - **Measuring at home:** stand on paper, mark heel to longest toe, measure in cm, match to the chart.
-

7. The Vault (recommended role: early access / membership)

Headline: The Vault. **Body:** Early access to drops, founder pricing, and the validation data before it's public. The list becomes the inside track.

- Pre-launch: doubles as the waitlist destination.
- CTA: `Get access →`

8. Utility / Help

FAQ — starter questions (answers once facts confirmed):

- What does "validated" actually mean? → FDDI testing scope; link Technology.
- When is the first drop? → [date, or "join the list to be notified."]
- How does sizing run? → link Size & Fit.
- What is the shoe made of? → link PDP spec / Materials.
- Shipping, returns, exchanges? → link policy.
- [Warranty / returns specifics.]

Shipping & Returns: [real policy – windows, India coverage, return conditions, once confirmed.]

Claim-Status Legend

Content	Publishable now	Placeholder until
Driving principle, brand narrative, voice	✓	—
Design targets (stability, torsion, load, comfort)	✓ — what we do	—
FDDI engagement scope & contracted deliverables	✓ — contracted	—
What each test <i>measures</i>	✓ — method, not result	—
Specific test <i>results</i> / performance numbers	—	FDDI report confirms the figure
Material spec values that depend on	—	confirmation

testing		
Customer testimonials	—	real post-launch reviews (never fabricate)
Partner logos / FDDI naming	—	permission / agreed format
Counters, prices, drop date, shipping policy	—	confirmed business decisions
Sustainability claims	✗ omitted	only if/when backed by material direction

Rule of thumb: if it's *what we do* — a target, a method, a contracted deliverable — say it now. If it's a *result* or a *number*, it waits for proof.
